Project I Proposal Mid Defense on

Skillup - A E-Learning platform

Students: Anupam Baral and Bibek Dangal

Coordinator: Aashish Neupane

Date : 2082/07/18

Introduction

- E-Learning is education delivered via the Internet, networks, or standalone systems, using electronic media to facilitate skill and knowledge transfer.
- It supports interaction between students and lecturers and distributes course materials online, leveraging technology for learning.
- Rising demand for cost-effective education, government support for online learning, and widespread smartphone and Internet access fuel E-Learning growth
- E-Learning is critical in the Information and Knowledge Age, enabling efficient acquisition, storage, and application of knowledge for organizational success.
- E-Learning bridges learning and work by using the same tools and technologies, making it easier to incorporate education into professional environments.
- SkillUp is an E-Learning platform offering flexible, device-based training in fields like Machine Learning and Programming, with real-time interaction for individual and group classes.

Statement of the Problem

- Inefficient Assignment Submission: Students submit assignments via hard copies or personal emails, lacking a streamlined process.
- Lack of Centralized Materials for Lecturers: New lecturers must independently source course materials, leading to inconsistency and inefficiency.
- Mandatory Physical Presence: Students must attend classes in person .
- Absence of Collaborative Platforms: Students lack effective platforms for sharing resources and engaging in monitored group discussions.

Objective(s)

The objective of this project is explained below:

- **Centralized Platform Development:** Design and implement SkillUp, a web-based E-Learning platform to address limitations of traditional learning by providing a unified, interactive environment.
- **Resource Repository:** Create a centralized repository for all course materials to ensure easy access for students and lecturers.
- **User-Friendly Interface:** Design an intuitive and user-friendly interface to enhance the user experience for both students and lecturers.
- **Improved Communication:** Enhance interaction and communication between students and lecturers through integrated tools.
- **Course Access and Management:** Enable students to enroll in courses and access study materials, while allowing lecturers to create and manage courses efficiently.

Preliminary literature review

- **Enhanced Engagement and Usability** E-Learning platforms like Moodle and iSpring create dynamic, accessible learning environments, with 78% of students reporting high usability, supporting SkillUp's goal of a unified, user-friendly platform.
- **Centralized Resources and Cost-Effectiveness:** These platforms provide centralized resource repositories, enabling cost-effective education delivery, aligning with SkillUp's objective of seamless content access, though continuous updates are needed to stay technologically relevant.
- **Improved Interaction and Communication:** Virtual platforms enhance teacher-student interaction, with 40.1% of students finding it easy to contact instructors and 42.3% rating virtual teaching positively, supporting SkillUp's real-time discussion and feedback features.
- **Support for Digital Competency and Motivation:** E-Learning fosters digital skills through blended learning and gamification, enhancing motivation and addressing practical disciplines, which SkillUp incorporates via its intuitive interface and interactive course creation.

Completed task- Admin portal

A screenshot of the E-Learning Admin Portal. The interface has a dark blue header with the 'E-Learning' logo and navigation links: Courses, Blogs, About Us, and Contact Us. A search bar is also present. On the left, a sidebar shows the user is logged in as 'Admin User' and lists menu items: Dashboard (active), Manage Users, Manage Courses, Profile, and Logout. The main content area displays a welcome message 'Good Afternoon, Admin User!' and a sub-message 'Let's manage your eLearning platform efficiently.' Below this are four summary cards: 'Total Students: 1', 'Total Teachers: 2', 'Active Courses: 0', and 'Enrollments: 0'. At the bottom, a 'System Activity' section contains a placeholder box with the text 'Recent activity logs will appear here.'

Completed task – Frontend , Backend

Completed task – Teacher Frontend

Remaining task – Backend design of Student and Teacher portal

Related Projects

The below are some related projects with my projects .

- Moodle: An open-source learning management system offering course creation, resource sharing, and student-teacher interaction, widely used in educational institutions.
- iSpring: A platform providing e-learning authoring tools and interactive courses, known for its user-friendly interface and integration with PowerPoint.
- Canvas LMS: A cloud-based learning platform that supports online learning, assessments, and collaboration, adopted by many universities for its scalability.

Your Contribution

- Localized Academic Focus: Unlike general platforms, SkillUp is designed specifically for Nepali academic institutions (e.g., TU campuses), integrating local curriculum like BCA courses with centralized repositories for region-specific resources, reducing dependency on global tools.
- Centralized database for syllabus/resources.
- Role-based access: Students submit online, lecturers manage easily.
- Reduces physical dependencies; promotes anytime access.

Proposed Approach

The System block diagram of this project is :

Proposed Approach

Describe your model, project with diagrams and all. You can use multiple slides under this topic.

- This slide shows how users interact with SkillUp through a system flowchart.

Methodology

We use the Waterfall Approach to develop SkillUp in a structured way. It follows sequential phases to ensure clear progress and quality.

- Requirements and Planning : This phase of waterfall project management identifies what the project should do.
- Design: The design phase solidifies and documents all your decisions.
- Implementation: This phase executes your project plan and design to produce the desired product.
- Testing : The testing phase uses various quality metrics and customer satisfaction to measure the project's success
- Maintenance : It is also a phase to identify any errors you might have missed during the testing phase

Expected Outcome

- SkillUp will bridge traditional and digital education, enhancing learning efficiency. Expected outcomes include:
- Centralized Learning Resource: Unified storage for materials, assignments, and quizzes.
- Improved Communication: Real-time interaction via forums and feedback.
- Efficient Course Management: Easy course creation and student progress tracking.
- Time and Cost Efficiency : Anytime, anywhere learning; reduced physical resource needs.
- Enhanced Monitoring : Admin oversight of user activity and performance.
